Office Action Summary	Application No. 10/726,809	Applicant(s) SKINNER ET AL.	
	Examiner Essama Omgba	Art Unit 3726	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 September 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 12-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 12-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 27, 2005 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 12 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Ganslein (EP 891007).

Ganslein discloses a method of installing a pair of bushings (1, 2) in an opening 10 that extends between a first side and a second side of a work member, wherein a first tubular part 5 of a first bushing 2 is inserted into the opening, the first bushing having first outer and inner circumferences and a first radial flange 6 connected to one end of the first tubular section, the first inner circumference surrounding a first opening that extends through the first tubular section, a second tubular section 3 of a second

bushing 1 is inserted into the first opening of the first tubular section of the first bushing, the second tubular section of the second bushing having second outer and inner circumferences and a second radial flange 4 connected to one end of the second tubular section, the second inner circumference surrounding a second opening that extends through the second tubular section, the second outer circumference sized to be closely receivable by the first inner circumference of the first bushing, the second radial flange of the second tubular section opposite the first radial flange of the first tubular section (figures 1 and 2), and the second tubular section of the second bushing is radially expanded to cause radial; expansion of both the first tubular section of the first bushing and the opening in the work member, the radial expansion of the second tubular member causing a tight interference fit between the second bushing, the first bushing and the work member respectively, the tight interference fit sufficient to axially and radially restrain the first and second tubular sections with respect to the work member, the expansion carried out by drawing a mandrel through the second opening, see attached English summary. Applicant should note that the recitation of circumferentially seamless inner and outer circumferences lends no patentable weight to the method being claimed. Also it is inherent that the radial expansion will cause the first radial flange to be moved axially relatively closer to the second radial flange.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3726

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ganslein in view of King, Jr. (US Patent 3,949,535).

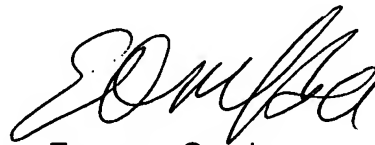

Ganslein discloses a method of installing a pair of bushings in an opening that extends between first and second sides of a work member as shown above. Although Ganslein does not disclose the radial expansion of the second tubular section of the second bushing introducing fatigue life enhancing compressive residual stress in the work member immediately around the opening in the work member, however such introduction of fatigue life enhancing compressive residual stress in work members during cold expansion is known as attested by King, Jr., see column 3, lines 46-68, column 4, lines 1-9 and column 11, lines 49-54. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made that expanding the tubular bushings in the manner disclosed by Ganslein would introduce fatigue life enhancing compressive residual stress in the work member immediately around the work, in light of the teachings of King, Jr., as is known in the art.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Essama Omgba whose telephone number is (571) 272-4532. The examiner can normally be reached on M-F 9-6:30, 1st Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
